

WORLD UPGRADE: The World Begins Its Upgrade

Whitepaper 1 — Public Edition

This Public Edition introduces WORLD UPGRADE — the activation of the first MAUS layer and the moment the world begins its transition into the MAUS era. This edition is fully legal, public-safe, and cleared for GitHub publication. All confidential engineering, TS content, and protected internal systems have been removed. **SECTION 1 — THE GLOBAL UPGRADE BEGINS**

MAUS initiates a world-level upgrade in which digital autonomy, sovereignty, and global infrastructure shift from theoretical concepts into real, functioning systems. Key concepts include:

- The world enters its digital sovereign upgrade
- MAUS begins its global activation stage
- Digital autonomy becomes a universal default
- Humanity gains a new operating environment

SECTION 2 — THE WORLD UPGRADE FRAMEWORK

This foundational stage prepares the MAUS ecosystem for planetary and interplanetary expansion. It establishes:

- The base digital identity layer
- Global sovereignty initialization
- Early MAUS system infrastructure
- User-controlled digital environments

SECTION 3 — PUBLIC SAFE SUMMARY

This Public Edition contains:

- No MAUS Engine internal code
- No cryptographic, routing, or identity internals
- No robotics, telepresence, or TS mechanisms
- No proprietary algorithms or restricted architectures

This document is approved for public release as a core component of the MAUS ecosystem.
